

Norma Irkham Maulana

RPA Developer | Software Engineer | UiPath Certified

Jakarta, Indonesia | 087711956056 | normairkham@gmail.com | linkedin.com/in/norma-irkham-maulana

SUMMARY

RPA & Software Engineer with **5+ years** of experience designing and delivering end-to-end automation solutions through RPA, software development, and system integration in the banking industry. Delivered **over 100 production-grade automation robots**, reducing manual effort, shortening processing time from **1–2 hours to 3–10 minutes**, and achieving **100% process accuracy**. Additionally, customized and implemented the bank's Enterprise AI Gateway, providing a secure and centralized AI access layer for automation platforms, conversational AI, and AI-assisted developer tools.

CERTIFICATIONS & ACHIEVEMENTS

- UiPath Certified RPA Developer (UiARD)
- 2nd Place Winner, ICStar National RPA Hackathon 2020
- RPA Training Co-Facilitator (in collaboration with IDStar & UiPath)

SKILLS

- **RPA:** UiPath (REFramework, Orchestrator, Queue Management, Assets, API Triggers, OCR, Attended & Unattended Automation)
- **AI & Integration:** Enterprise AI Gateway (Bifrost, LiteLLM, Langfuse), LLM Integration, AI API Integration, Prompt Engineering, Claude Code, OpenAI Codex
- **Software Development:** PHP (Laravel), RESTful APIs, JavaScript, Node.js, Go, AJAX, HTML/CSS, Bootstrap, jQuery
- **Infrastructure & DevOps:** Docker, CI/CD (GitLab CI, GitHub Actions), Linux (Ubuntu), Windows Server, Nginx, Apache
- **Databases & Data:** SQL Server, MySQL, PostgreSQL, Redis (Caching)

PROFESSIONAL EXPERIENCE

PT Bank Mega — Senior Automation & Software Engineer

November 2020 – Present

Responsibilities

- Collaborate with business users to understand manual business processes and identify automation opportunities
- Design and deliver end-to-end automation solutions by combining RPA, web applications, APIs, and AI technologies to optimize banking operations
- Design, develop, and maintain the bank's Enterprise AI Gateway, providing secure and centralized access to enterprise LLM services for internal chatbot applications and AI-assisted developer tools
- Ensure the reliability and performance of production systems through incident investigation, root cause analysis, performance optimization, and continuous enhancements

Core Projects

1. Enterprise RPA Automation Solutions

Designed, developed, and deployed **over 100 production-grade RPA robots** across banking operations, including multiple **24/7** unattended automation solutions, reducing manual effort and shortening average processing time from **1–2 hours to 3–10 minutes** while improving operational efficiency and process accuracy.

- Core RPA Architecture: REFramework and Orchestrator for scheduling, monitoring, and queue management
- Advanced UI & Document Processing: Implemented dynamic selectors, OCR-based captcha solving, terminal/mainframe automation, web/mobile application automation, and document extraction (PDF, Excel, XML, Word, Text)

- Integration & Data Exchange: Engineered integrations with REST APIs, databases, and FTP/SFTP, including data scraping/extraction for structured and unstructured data across systems
- Production Reliability: Built exception handling with retry mechanisms, logging, and real-time notifications (Email, SMS, WhatsApp, Telegram), ensuring 100% accuracy

2. Enterprise AI Gateway

- Customized and extended the open-source Bifrost AI Gateway
- Integrated and managed multiple LLM providers, implementing load balancing, fallback mechanisms, and usage monitoring to ensure high availability and cost optimization
- Monitored platform performance, optimized request latency, and ensured reliable AI service availability in production
- Performed production support, troubleshooting, and continuous platform enhancements

3. Web Application Solutions

- Dispute Resolution System (Bi-Fast, Credit Card, ATM): Architected a modular Laravel application with REST API integration, automated workflows, form handling, and real-time notification systems (Email/WhatsApp). Successfully reduced transaction processing time from **1 hour to 5–10 minutes** per transaction.
- Closed Card & Waiving Service Charge System: Developed a workflow-driven application for credit card closure and service charge waiver processing, integrating call center apps and core banking systems with automated eligibility evaluation, parameter-driven approval recommendations, and end-to-end operational workflows.
- Reconciliation System (Bi-Fast, QR, Biller): Developed an automated reconciliation engine that automated 85% of previously manual reconciliation operations, then acted on the results through real-time transaction posting and automated refunds for failed transactions, closing the loop from detection to resolution. Designed to reliably process 1–2M heterogeneous banking transactions daily, ensuring accuracy, consistency, and audit readiness across all channels.

PT IDStar Cipta Teknologi — ICStar (RPA) Hackathon

May – September 2020

- Built an automation system for reconciling 3rd Party Transactions (Visa) in the banking industry, replacing a manual process that previously took **2 hours**
- The automated robot completed the task in **3–5 minutes**, reducing operational costs and achieving **100% accuracy** by eliminating the previous **40% human error rate**
- This innovation earned the 2nd Place Winner award

EDUCATION

Telkom University — Bachelor of Telecommunication Engineering

2016 – 2020 | GPA 3.66
